"MAE"

A seedling of Sample. Imperfect blossom. Foliage similar to Sample, but much larger and more vigorous, possibly one-third larger than Premier. Berries very large, fine and prolific, setting as high as 5 to 10 fruit stems on an individual plant. The extremely large foliage protects the blossoms from late frosts, thus insuring annual crops, which ripen early mid-season, four or five days later than Premier. Very fine and with few seeds. Excellent shipper. We have tested this berry alongside of many other very prolific commercial varieties and find it unexcelled. A most unusually prolific berry, producing three to four times the quantity of perfect berries as Premier. A valuable commercial variety.
